INTRODUCTION

What is Momentum?

Momentum is a task tracker I built to actually stay on top of things — assignments, exam prep, personal goals, whatever needs tracking. It's built for the two of us (and anyone else I share it with) to use for free, from any device.

● **Multiple lists**

Keep separate lists for separate parts of life — college, personal, projects.

● **Tags & filters**

Label tasks Urgent, Work, Personal, or your own custom tags, then filter instantly.

● **Drag to reorder**

Drag tasks up or down to reprioritize — it saves automatically.

● **Email reminders**

Set a date & time on any task and get an email when it's due.

● **Stats at a glance**

See completed / pending counts and per-tag breakdowns for every list.

● **Works on mobile**

Fully usable from your phone browser, no app install needed.

STEP 1

Create your account

● MOMENTUM

Build your momentum

Track tasks, build streaks, get things done.

NAME

EMAIL

PASSWORD

1

Get the link from me

I'll send you the Momentum web link directly — just open it in any browser, phone or laptop.

2

Click "Create an account"

On the login page, tap the link below the form that says "New here? Create an account."

3

Fill in your details

Enter your name, a real email address (you'll need it for reminders & password reset), and a password of at least 6 characters.

4

You're in!

You'll land straight on your empty Dashboard, ready to create your first list.

STEP 2

Your Dashboard

The Dashboard is your home base — every list you create shows up here as a card.

1

Type a list name

Use the box at the top — e.g. "College Assignments" or "Personal Goals" — then press Add list.

2

Open, rename or delete anytime

Click a list's name to open it. Use Rename or Delete on any card whenever you like — deleting a list removes its tasks too.

STEP 3

Adding tasks & tags

Inside any list, adding a task takes three quick parts: the task name, an optional reminder, and optional tags.

Daily Study Guide

SET REMINDER (OPTIONAL)

Tags for this task (optional)

Urgent

Important

Personal

Work

Add task

Revise DBMS notes

Important

1 Type the task, then optionally pick a date/time

The reminder is optional — leave it blank if you don't want an email for that task.

2 Pick tags, or type your own

Click preset tags like Urgent or Work, or type a custom tag and hit the small Add button.

3 Press "Add task" once

That's the only button that actually submits — everything above it is just filling in details first.

STEP 4

Completing, filtering & stats

Example task states

1

Tap the circle to mark done

It fills green immediately and the title gets struck through. Tap again to undo.

2

Use tag filters to focus

Click any tag pill (e.g. "Important 2") to show only matching tasks. Click "All" to reset.

3

Watch the stats bar update live

Total, completed and pending counts update the moment you check or add a task — no refresh needed.

STEP 5

Reordering tasks by priority

Press and hold any task, then drag it up or down. The new order saves automatically — even after you refresh.

BEFORE

- ⋮ Read chapter 3
- ⋮ Submit assignment
- ⋮ Group meeting notes

AFTER

- ⋮ Submit assignment
- ⋮ Read chapter 3
- ⋮ Group meeting notes

1

Click and hold a task

Your cursor (or finger on mobile) grabs the whole task row — you'll see it lift slightly.

2

Drag to the new position

Move it above or below other tasks — the list shifts live as you drag.

3

Release to drop

Let go, and the new order is saved to your account instantly.

STEP 6

Email reminders

Set a date and time on any task, and Momentum emails you automatically when it's due — no need to remember to check the app.

**Good to know**

Reminders are sent to the email address you signed up with, so make sure it's one you actually check. If the app hasn't been visited in a while, the very first email after a quiet period may arrive a little later than expected while the server wakes back up — this is normal on the free hosting plan.

1

Open any task's reminder field

When adding a task, tap the date/time box and pick when you want to be reminded.

2

That's it

No need to do anything else — the email arrives automatically when the time comes.

STEP 7

Forgot your password?

No need to message me — Momentum has a self-service reset flow using a code sent to your email.

1

Enter your email

On the login page, click "Forgot password?" and type your account email.

2

Enter the 6-digit code

Check your inbox for a code and type it in — it expires after 10 minutes.

3

Set a new password

Choose and confirm a new password, then you're redirected to log in.

Tip

Always use the code from your most recent email — requesting a new one makes any earlier code stop working.

STEP 8

Account settings

Already logged in and just want to change your password? Use Settings instead of the password flow.

Settings

Change password

Update your account password.

CURRENT PASSWORD

NEW PASSWORD

CONFIRM NEW PASSWORD

Update password

1 Open Settings

Click the "Settings" button in the top bar of any page (next to Log out).

2 Enter current + new password

You need your current password as proof it's really you.

3 Save and you're done

No email or code needed for this path — it's instant.

BEFORE YOU GO

Quick tips & troubleshooting

● **Nothing loading?**

The free server can take up to 50 seconds to "wake up" if it hasn't been used in a while. Just wait a moment and try again.

● **Didn't get an email?**

Check your spam/junk folder first — reminder and reset emails sometimes land there initially.

● **Forgot which list something's in?**

Use the tag filters inside each list, or just check your Dashboard — all your lists are always visible there.

● **Want a fresh start?**

You can delete a list anytime from the Dashboard — this also removes all tasks inside it, so use it carefully.

Still stuck on something?

Just message me directly — I built this app, so I can fix or explain anything that isn't working.
